Release 1 Plan
Pronzo
Noodles
Capellini
Release: 04 - 10 - 2017
v1.0.0
Revision: 04 - 10 - 2017

High Level Goals
- Create a usable application
- Create user profiles with user information, user food preferences, and user interests
    - Linkedin or .edu email logins only
- Create a settings page so a user can change and update their settings
- Create a post board for meet ups with the intention of adding a map linked to the posts
- Create an in app messanger
- Connect the restaurant search bar to the Yelp API (made available to developers?)
- (User programmable?) Filter on age, food preferences, and interests
- Companies submitting ads for meal discounts

User Stories for Release
- Sprint 1
    - Create a usable application
        - As a user, I want an application that can connect me with professionals that work in the same field and share common interests as me so that I can build connections within my industry and people alike. (21)
    - Create user profiles with user information, user food preferences, and user interests
        - As a user, I want a login in with Linkedin or .edu email logins only to ensure a safe login system (2)
        - As a user, I want to be able to build a profile that contains information about myself that other professionals may view and use as a basis to see if they are interested in connecting. (3)
    - Create a settings page so a user can change and update their settings
        - As a user, I want to be able to adjust my settings to match up with my interests. (2)
            - Have a tab to edit the user's preferences/interests, change password, change profile picture
    - Create a post board for meet ups with the intention of adding a map linked to the posts
        - As a user, I want to see when and where other like-minded professionals are planning to go to lunch so that I can schedule meetings at convenient times and locations (8)
        - As a user I want to view a map to see the locations of other user's meeting posts so I can know how close others are to me. (5)
- Sprint 2

- Create an in app messenger
    - As a user, I need to be able to quickly and easily communicate with someone I am meeting with so that we can better coordinate (specific) times and locations. (13)
- Connect the restaurant search bar to the Yelp API (made available to developers?)
    - As a developer, I want to use the Yelp API with the search bar to make their restaurant database available (3)
    - As a user I want an auto-completion/auto-suggestion feature so I do not have to type a specific restaurant but a style of food and receive results (5)
- (User programmable?) Filter on age, food preferences, and interests
    - As a user I want to be able to filter various categories to create an event feed more catered to my preferences.(5)
- Sprint 3
    - Allow users to report other users in case of any dangers or spam activity (5)

Product Backlog
- Companies submitting ads for meal discounts
    - As a marketer, I want people using the app to go eat at my restaurant. (13)
